

INDUSTRIAL SYMBIOSIS TOOL FOR THE SEA-INDUSTRY SECTOR - The project was funded under the Nexos call, co-funded by the European Union

SIMBlue

Partners:

Subcontracted entity:

The main objective of this project is to develop a comprehensive digital solution based on industrial symbiosis and Artificial Intelligence for the valorisation of side streams in the sea-industry sector.

The intended result is an advanced digital platform connecting generators and valorisers of side streams, incorporating traceability, intelligent recommendation algorithms and a Digital Product Passport (DPP) for each flow.
